DATE MAILED: 07/12/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Response to Arguments

1. Applicant's arguments with respect to claims 9-23 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 14, 16, 18, 19, 21 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Falck et al (US PAT 6,360,265) in view of Liberti et al (US PAT 6,947,408).

Regarding claim 14, 18, 19 and 23, Falck et al (US PAT 6,360,265) discloses delivering Internet data-grams for multimedia services wherein a first TCP/IP (control data) and a second TCP/IP (control data). However, Falck is silent on multiplexing control data. In analogous art, Liberti discloses wireless Internet access that supports multimedia transmission wherein multiplexing module multiplexes control data streams (TC/IP packets) into one data stream/packet that is transmitted/collectively transmitting multiplexed control data (Abstract, col. 6, line 4-67, col. 20, line 4-23). Therefore, it

Art Unit: 2616

would have been obvious to one of ordinary skill in the art at the time of the invention to be motivated to implement multiplexing a first and second control data as taught by Liberti with the teachings of Falck for the purpose of improving transmission efficiency associated in a multimedia Internet environment.

Regarding claims 16 and 21, as indicated above, Falck discloses a first TCP and second TCP associated in a multimedia Internet transmission environment. Falck further discloses that H.245 protocol is used in association with TCP data connection to negotiate call characteristics as well as voice encoding (col. 5, line 20-45).

Allowable Subject Matter

4. Claims 9-13 are allowed over prior art.
5. Claims 15, 17, 20 and 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. The following is a statement of reasons for the indication of allowable subject matter: The prior art fails to teach or fairly suggest with respect to claim 9 and 13, determining to which group each of plurality of control data belongs, and a multiplexer that multiplexes control data determined to belong to a same group, so as to generate multiplexed control data, with respect to claims 15 and 20, second control data is a message capable of being transmitted without waiting for response data from a communicating partner to the first control data, and with respect to claim 17 and 22, the

Art Unit: 2616

first control data includes a master slave determining message and the second control data includes a terminal ability information exchanging message.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Prenell P. Jones whose telephone number is 571-272-3180. The examiner can normally be reached on 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi Pham can be reached on 571-272-3179. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
